

iPhone-user Journey Map

G.yuvaraj,S.prasanthi,G.anjali devi,K.sree chandana
B.sidhartha,G.mahidhar

History

Launched on JAN 9 2007 by Steeve jobs

- **FEATURES**

- User experience (IOS)
- Security and Privacy
- DIY repairs
- High performing chipsets
- Camera quality
- Water and dust resistance

Benifits of iphone

- Seamless Ecosystem
- Software Optimisation
- Privacy and Security
- Integration with Apple
- Longevity and Resale Value
- Customer Support

Problems faced by user

1. Battery Life

Problem: *Battery degrades overtime, requiring frequent charging.*

2. Storage Limitations

Problem: *Fixed storage capacity without external memory options.*

3. Price

Problem: *iPhones are expensive , limiting accessibility*

4. Compatability with non apple devices

problem: *limited integration with non apple Eco systems*

5. Over Heating

Problem: *Overheating during intensive use (e.g., gaming, heavy multitasking).*

Solutions

1. Battery-life :

Introduce AI powered energy optimization that adjusts settings and app usage dynamically based on user habits maximising battery longivitiy

2. Storage Limitation:

Push cloud integration further , offering seamless automatic background syncing with advanced compression for photos and videos

3. Price

Develop a modular iPhone that allows user to upgrade specific components rather than buying a new device

4. Compatability with Non Apple Devices :

Expand cross platform support and introduce universal adapters allowing iPhone user to connect easily to non apple device

5. Overheating :

Innovate with liquod cooling technology to manage heat more effectively
